

USER CENTERED SOFTWARE DESIGN

INSIGHT.HMI

Simple and efficient device operation.
Anytime and anywhere.

INSIGHT.HMI

Your priorities. Our answers.

Food safety is ensured when many factors work together seamlessly. Insight.HMI, as user-centered operating software, makes every production line more efficient, effective, simpler, and consequently safer from the very first setup.

With a focus on the machine operator, control is carried out through widget modules that provide all important information at a glance — soon to be combined with intuitive shortcuts for additional settings. Graphical representations enable quick and intuitive understanding of device and production performance.

Remote Control

Insight.HMI enables device operation on an entirely new level. Gone are the days when settings and evaluations could only be made and viewed on the device in the line. Simply connect the control unit and mobile device to the same network, scan the QR code on the device — and the display is 100% available on the mobile device. Anytime. Anywhere.

YOUR TOP 3 INSIGHT.HMI HIGHLIGHTS

- QUALITY
 - CUSTOMIZATION
 - PERFORMANCE
- at your fingertips.

Whether it is audit checks or performance analysis, live events or history: Important incidents are directly documented via logbook and device dashboards.

Additional features:

- Intuitive structural design
- Modern integration options thanks to web technology
- Real-time monitoring of your Sesotec devices
- Continuous expansion of functionality in close collaboration with our customers worldwide

INSIGHT.HMI

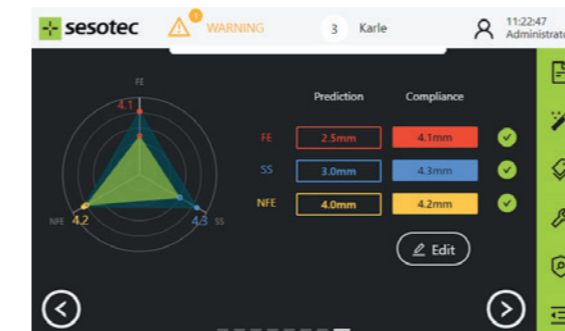

Simplify your Life. For more profit.

7" Touch-Color-Display

The generous screen size leaves nothing to be desired in terms of modern screen design. The high-quality surface allows for reliable device cleaning and signal reception in any production environment.

The „Wheel of Auditcheck“ powered by Sesotec: Innovative display of any sensitivity settings. Immediate on-demand performance tests can be started via a shortcut at the bottom.

Compliance is child's play with preset widget views.
